Hemlocks

Canada Hemlock

No evergreen is more graceful or beautiful than our Canada Hemlock. It will thrive in sun or shade, and laughs at subzero weather. The dwarf form is very desirable where a slowgrowing compact plant is required. The Sargent's Weeping Hemlock is very unusual. We have some fine specimens of this rare plant.

Plant now and enjoy the rewards of your efforts next year and in the years to come. For example, planted this spring, a small bed of asparagus will furnish delicious meals in two years; raspberries and blackberries will bear copiously in two years, too. Fruit trees planted now should begin bearing in about four years.
